RUTH FAMILY GENEALOGY

MARIE RUTH - JOHN WEBER

BRANCH No 15

M
929.2
R932
v. 6

John Smith ♂ Mary Gray

This sheet has been prepared to assist in the study of relationships. Two relationship charts and one family chart are presented with complete instructions in their use, making it possible for most everyone to understand this little known art of figuring relationships between distant cousins and other relatives. A few problems are given with the answers on the reverse side. Hundreds of other problems can be formulated by a teacher. Others may wish to make up problems on their own to practice this interesting phase of genealogy.

The first question that arises in the study of the family chart above is how to figure out the lines of ascent or descent. Where a couple is shown the symbol "♂" is used to indicate their marriage and their children are indicated by lines from the symbol: Julius Brown ♂ Doris Jenkins Fred Fly ♂ Julie Smith Oliver Brown Michael Brown Judith Fly

Where the father only is shown, a line connects to his children: Reed Green Merlin Johnson Milton Smith Afton Green Carol Johnson Conrad Smith

Sometimes a circuitous line is drawn because of lack of space and you will find brothers and sisters on two or more different levels, yet connected by lines to their parent:

Peter Smith	Michael Brown
Harold Smith	Dwain Brown
x x x	Thomas Brown
Dale Smith Homer Smith	Norman Brown
Thus Harold, Dale and Homer are sons of Peter. And Dwain to Gilbert Brown are all children of Michael, full brothers and sister. (Agnes Brown is the daughter of Norman Brown)	Calvin Brown
	Alice Brown
	Ivan Brown
	Gilbert Brown

Another difficulty the neophyte genealogist will encounter is the problem of finding the common progenitor. Great care must be exercised in not going beyond him, as well as being sure you count each generation up to him. Counting just one step too few or too many will give you the wrong answer. In problem No. 1 below, the common progenitor is Wallace Smith as he is first one where the lines of Conrad Smith and Carol Johnson run together. And so it is in every case - the common progenitor is always that person or couple through whom relationship springs and who's sons and/or daughters head separate lines of descendants. Henry Smith is the common progenitor in problem No. 2, and John Smith is the common progenitor in No. 3.

After finding your common progenitor, call him "O" and count down first on one line to one of your subjects, then down the other line to the other subject. By using these two figures and the relationship chart on the reverse side it is easy to tell the exact relationship between them.

Regarding the descendants of Roy Page - the sons from the first and second wives are half brothers and their children are half first cousins and so on down. The same with the children of M. Good - Ben Rich and Dale Page are half brothers. Roy Page is the stepfather of Ben and Linda Rich, and Stephen Page is their stepbrother. Reference is seldom made to step-cousins, aunts, uncles, grandparents, etc., but these could be figured on the same basis as stepfather, mother, bro., or sis.

Problems: What is the relationship between 1) Conrad Smith & Carol Johnson; 2) Agnes Brown & Max Smith; 3) Dennis Smith & Janice Page; 4) Rex Page & Sol Page; 5) Janice Page & Linda Rich; 6) Allan White & Leo Davis? 7) What is the relationship of Milton Smith to John Green; 8) Gilbert Brown to Mary Gray?

Compare with chart above and chart on reverse side.
