v. 7

## RELATIONSHIPS

There are at least two accepted ways of figuring relationships. One is called the Common or Canon Law method, and the other the Civil Law method. Both agree when figuring the direct or lineal descent. They differ only in figuring the collateral relationships. As the Common or Canon Law method is now in general use and gives a more accurate description of "cousin relationship," we will not consider the Civil Law method, but present for your use a chart, especially prepared for this publication, which shows (according to the Common or Canon Law), the relationship of descendants to a progenitor to the tenth generation. Also the relationship between his descendants, in any combination of degrees from him, down to and including the tenth generation.

### HOW TO USE RELATIONSHIP CHART

You will note that the two upper columns are outlined in heavy lines. These are the common progenitor and his descendants. "CP" stands for common progenitor, the one who is the head of the two lines of descendants. "S" is his son or daughter as the case may be; "GS" his grandson or granddaughter; "GGS" his great grandson or granddaughter; "2GGS" his second great grandson or granddaughter, and so on down to his eighth great grandson or granddaughter.

All the diamonds inside these heavy lines show the relationship between his descendants. By following columns "1" from both sides of the chart we find they cross on the "B" diamond, showing that the sons of the common progenitor are brothers. By following columns "2" to the center we find they cross at the "1C" diamond, indicating that grandsons of the common progenitor are first cousins to each other. And so on down: his great grandsons are second cousins; his second great grandsons are third cousins; his third great grandsons are fourth cousins, etc.

To this point few people have trouble in figuring relationships. It is when they start to figure the "cousinship" and "times removed" that they have difficulty. But with this chart you will find no trouble with any combination up to the tenth generation, and by following the pattern set by this chart you can go as many generations as you desire. Say you want to figure your relationship to a distant cousin. You are eight generations removed from the common progenitor, or his sixth great grandson. Your "distant cousin" is six generations removed or his fourth great grandson on another line. To figure your exact relationship simply follow columns "8" on the one side and "6" on the other to where they cross and you find "5C 2R" indicating you are fifth cousins twice removed.

If you want to find your relationship to the son of your fifth great grandfather, follow columns "1" and "7" which show you are his fourth great grandnephew (4 GGN). Likewise, you are a first cousin six times removed (1C 6R) to the grandson of your sixth great grandfather.

This method of figuring relationships is in general use by most courts of the country and was recently adopted for use of the patrons of the Genealogical Society of the Church of Jesus Christ of Latter-day Saints.

As additional aids to understanding terms used in relationship descriptions we give the following:

The parents of your father or mother are your grandfather or grandmother and you are a grandson to them. (GS)

The parents of your grandfather or grandmother are your great grandparents and you are a great grandson to them. (GGS)

The parents of your great grandmother or great grandfather are your second great grandparents and you are a second great grandson to them, etc., etc., (2GGS)

The children of your brothers and sisters are your nephews and neices (N) and you are uncle or aunt to them.

The children of your neices and nephews are your grandneices or grandnephews (GN) and you are granduncle to them.

The children of your grandnephews and grandneices are your great grandnephews or great grandneices (GGN) and you are great granduncle to them.

Your father's brother or sister is your uncle or aunt and you are a nephew or neice to them. (N)

The children of your uncle or aunt are your first cousins and you are also their first cousin. (1C)

The children of your first cousins are first cousins once removed to you and you are the same to them. (1C 1R)

The son of your third great grandfather is your second great granduncle and you are a second great grandnephew or neice to him.

The children of your second cousins are your second cousins once removed and you are the same to them.

The grandchildren of your second cousins are your second cousins twice removed and you are the same to them.

The great grandchildren of your second cousins are your second cousins thrice removed and you are the same to them.

The second great grandchildren of your second cousins are your second cousins four times removed and you are the same to them.

A simple formula for figuring cousin relationships by the above method is this: Call the common ancestor "0" and count down to the subjects; subtract one from the smaller of the two figures - this is the cousin relationship. Then subtract the smaller number from the larger and this gives you the times removed. Example: one subject is seven steps down from the common ancestor, the other is four steps down - one from four is three, so the cousinship is third cousins, and four from seven is three (three times removed) making them third cousins three times removed (3c3r).

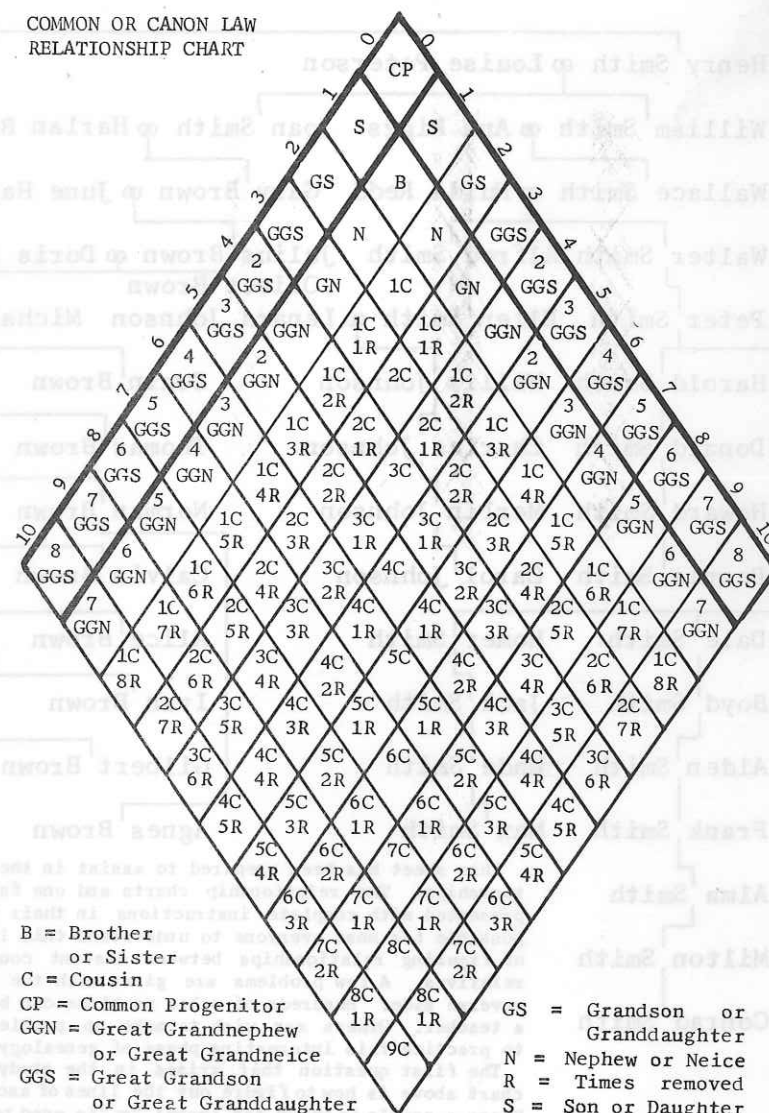

Another example:

Subject No. 1 is 9 steps down from the common ancestor. Subject No. 2 is 6 steps down from the common ancestor. 6 - 1 = 5th cousin. 9 - 6 = 3 times removed. So they are fifth cousins three times removed. (5c3r).

Of course, if the steps down from the common ancestor are the same you simply subtract 1 from that number and it gives you their cousinship and there are no times removed to be figured. Remember also that the common ancestor is never counted when figuring the steps down to the subject, just as it appears on the chart.

Answers to problems on reverse side: 1) 5C 3R; 2) 5C 2R; 3) 7C 1R; 4) half 1C 1R; 5) step sisters; 6) 3C 1R; 7) 8GGN-i-1; 8) 4GGS.

COMMON OR CANON LAW  
RELATIONSHIP CHART

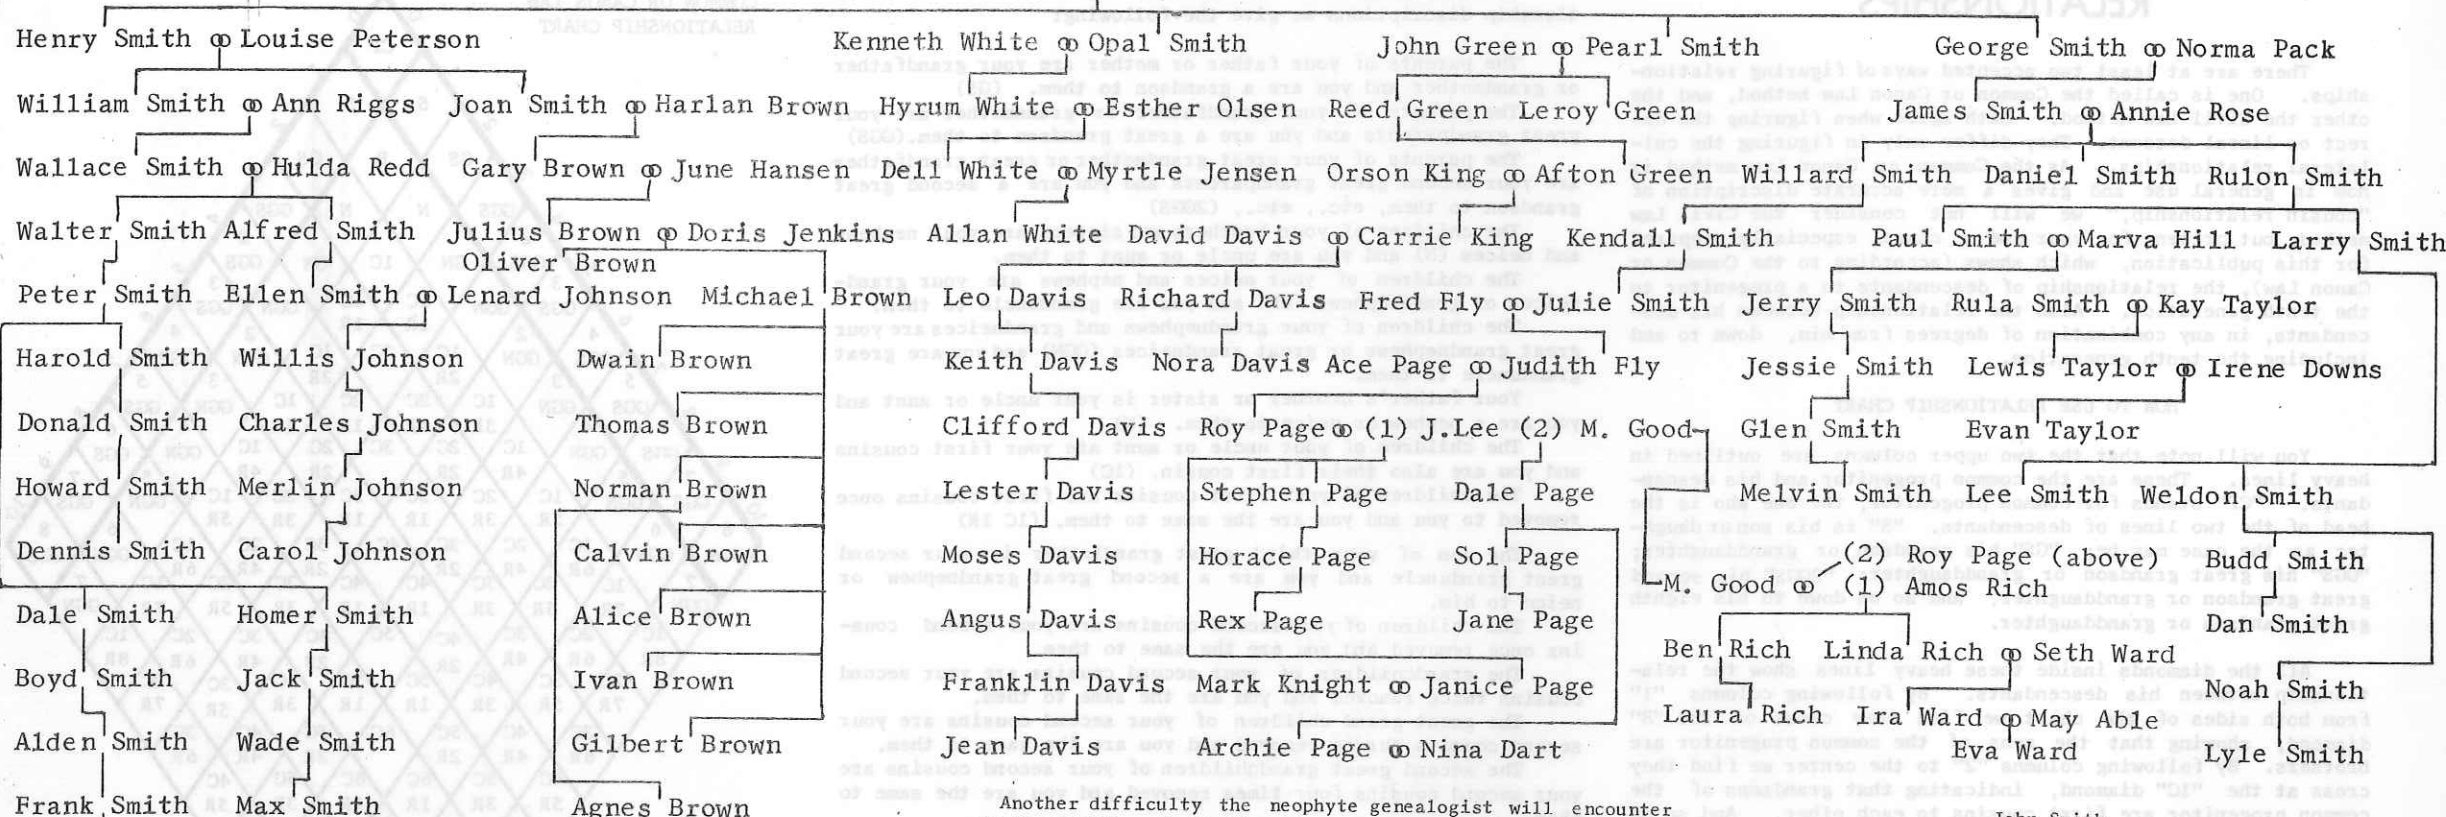

B = Brother  
or Sister  
C = Cousin  
CP = Common Progenitor  
GGS = Great Grandson  
or Great Grandneice  
GGN = Great Grandnephew  
or Great Grandneice  
GS = Grandson or  
Granddaughter  
N = Nephew or Neice  
R = Times removed  
S = Son or Daughter

John Smith ♂ Mary Gray

This sheet has been prepared to assist in the study of relationships. Two relationship charts and one family chart are presented with complete instructions in their use, making it possible for most everyone to understand this little known art of figuring relationships between distant cousins and other relatives. A few problems are given with the answers on the reverse side. Hundreds of other problems can be formulated by a teacher. Others may wish to make up problems on their own to practice this interesting phase of genealogy.

The first question that arises in the study of the family chart above is how to figure out the lines of ascent or descent. Where a couple is shown the symbol "♁" is used to indicate their marriage and their children are indicated by lines from the symbol: Julius Brown ♂ Doris Jenkins Fred Fly ♂ Julie Smith Oliver Brown Michael Brown Judith Fly

Where the father only is shown, a line connects to his children: Reed Green Merlin Johnson Milton Smith Afton Green Carol Johnson Conrad Smith

Sometimes a circuitous line is drawn because of lack of space and you will find brothers and sisters on two or more different levels, yet connected by lines to their parent:

Peter Smith	Michael Brown
Harold Smith	Dwain Brown
x x x	Thomas Brown
Dale Smith	Norman Brown
Homer Smith	Calvin Brown
Thus Harold, Dale and Homer are sons of Peter. And Dwain to Gilbert Brown are all children of Michael, full brothers and sister.	Alice Brown
(Agnes Brown is the daughter of Norman Brown)	Ivan Brown
	Gilbert Brown

Another difficulty the neophyte genealogist will encounter is the problem of finding the common progenitor. Great care must be exercised in not going beyond him, as well as being sure you count each generation up to him. Counting just one step too few or too many will give you the wrong answer. In problem No. 1 below, the common progenitor is Wallace Smith as he is first one where the lines of Conrad Smith and Carol Johnson run together. And so it is in every case - the common progenitor is always that person or couple through whom relationship springs and who's sons and/or daughters head separate lines of descendants. Henry Smith is the common progenitor in problem No. 2, and John Smith is the common progenitor in No. 3.

After finding your common progenitor, call him "O" and count down first on one line to one of your subjects, then down the other line to the other subject. By using these two figures and the relationship chart on the reverse side it is easy to tell the exact relationship between them.

Regarding the descendants of Roy Page - the sons from the first and second wives are half brothers and their children are half first cousins and so on down. The same with the children of M. Good - Ben Rich and Dale Page are half brothers. Roy Page is the stepfather of Ben and Linda Rich, and Stephen Page is their stepbrother. Reference is seldom made to step-cousins, aunts, uncles, grandparents, etc., but these could be figured on the same basis as stepfather, mother, bro., or sis.

Problems: What is the relationship between 1) Conrad Smith & Carol Johnson; 2) Agnes Brown & Max Smith; 3) Dennis Smith & Janice Page; 4) Rex Page & Sol Page; 5) Janice Page & Linda Rich; 6) Allan White & Leo Davis? 7) What is the relationship of Milton Smith to John Green; 8) Gilbert Brown to Mary Gray?

Compare with chart above and chart on reverse side.
